

Micro Sprint 6

Deadline	September 12th - 5:00am
Deliverable	MS6 wiki link
Possible points	10 points

MS 6 Rubric– Deliverable description

At this point you only have one idea, in which you should go deeper and really understand the value proposition of your solution. This solution must have an already proposed UI.

Create a new page in your wiki repository titled "MS6" for this deliverable.

Please note that GitHub records edit timestamps in GMT (UTC+0), while all course deadlines are specified in GMT-5. Your submission must not be modified after the deadline. We will use the timestamp of the last edit recorded by GitHub to verify compliance. Submissions edited after the deadline will receive a grade of 0, in accordance with the course submission policy.

Disclaimer:

We expect all submissions to reflect the best quality of work you can produce. This assignment is an opportunity to apply the knowledge and skills you have developed throughout your undergraduate program, as well as the concepts covered in this course. High-quality submissions typically demonstrate the following:

1. **Clear visuals:** Include images that are legible and of sufficient resolution to be easily read.
2. **Consistency:** Use a clear and consistent format throughout the report, including headings, figures, and tables.
3. **Implementation:** Apply the principles and criteria presented in the lectures, laboratories, and course materials. Be sure to read and follow the instructions provided for each resource.

If you have any questions, **take advantage of the office hours** offered by the teaching assistants and professors. Each TA and professor is available for two office hours per week to answer your questions and clarify any topic.

MS6 – Detailed Description

Here you can find a detailed description of what you have to deliver in MS6. Your total amount of work depends on the size of your team. Each one of the following points needs to be present in your wiki page.

Remember the Guidelines on the Usage of Generative AI for this course. As stated in the syllabus: “AI may be used for brainstorming, outlining, and generating ideas to improve your work. However, **no AI-generated content may be included in the final submission [of any deliverable]**”. In the case of prototyping and visual design, you may use these tools in the level 4 of the AI assessment scale [1].

Deliverable Description

1. **[Max 0 points]** Identify what is the value proposition of your solution. Consider aspects such as what makes your solution different from the existing solutions. **Failure to submit this component will result in the deliverable not being graded.**
2. **[Max 10 points]** You must define important aspects of the UI/UX design: (i) colour palette and its rationale; (ii) fonts; (iii) icons and images; (iv) UI prototype; (v) navigational patterns.

This is a deliverable that helps you to receive feedback for MS7 and for the GUI of the entire app.
